

WRIGHT AT HOME

Explore geometry and patterns with stop motion animation!

Use geometric shapes to compose a still frame (we used wood blocks, but you could cut shapes from colored paper or use lids from different shaped boxes).

Take a photograph and then slightly move one object in the frame. Take a new photograph each time you make changes.

Use a free stop motion animation app (we used Stop Motion Studio) to combine the images in the order they were taken.

Watch as your still photographs are transformed into an animation! Use a tripod or still hand when photographing for the best results.

For an added challenge, take your photographs throughout the day and watch how light affects the animation!
